CHAINBOIS
WEB3 GAMING

ChainBois Web3 Gaming

Making Web3 Gaming Valuable And Engaging

Project Name: ChainBois Web3 Gaming

Industry: Web3 Gaming

Project Description:

ChainBois' first release is a 3rd person shooter available on PC and mobile. ChainBois prioritizes immersive gameplay, great graphics, and a gaming experience that has gamers yearning to come back for more. We have also incorporated a first in kind earning platform that enables players to win $SOMI through weekly tiered tournaments. The game is fueled by our native token $BATTLE which serves as our in-game utility token allowing players to purchase and own in-game assets, sell them for profit, as well as convert $BATTLE token to $SOMI for financial gain.

Web3 Gaming Has Problems

At ChainBois we saw an industry that had problems that needed to be addressed in order to create a gaming experience that would have long lasting success, appealing to Web3 gamers as well as Web2 gamers.

These problems were leading to a lack of player retention, a lack of profitability for gamers, and a disinterest in Web3 gaming as a whole.

ChainBois set out to solve these problems.

Problem 1

-Web3 Games Weren't Engaging

-Early Web3 Games Were Simple, Repetitive, And Rudimentary

-Players Became Bored, Lost Interest, And Returned To Web2 Games

-Player Retention Suffered

Solution 1

-ChainBois Is Creating An Immersive Experience For Our Gamers Including:

-High End Graphics

-In-Game Missions And Accomplishments

-Character Upgrades

-Limited Edition Characters/Skins

-Weekly Tournaments

-Multiple Team And Individual Game Modes (Battle Royale, Search And Destroy, etc.)

-A Wide Variety Of Common And Rare Assets With Unique In-Game Characteristics

-Drivable Vehicles And Tanks

-And Much More On Both Mobile And PC

Problem 2

-The Large Majority Of Web3 Games Award Players Only With A Native Game Token

-Due To Poor Tokenomics, Insufficient In-Game Utility, And The Hyper Inflationary Nature Of Web3 Gaming Tokens, These Tokens Decrease In Value And Leave The Players With Minimal To No Financial Returns For Their Gameplay

-The Games Aren't Able To Sustainably Reward Their Players And Eventually Fail

Solution 2

-ChainBois Has Developed A First In Kind Sustainable Earning Model Awarding $SOMI To Our Players

-Players Are Able To Earn A Cryptocurrency In-Game That Has True Lasting Value

-But That's Not All. ChainBois Has Changed The Tokenomics Landscape In Web3 Gaming

-As Opposed To The Majority Of Inflationary Web3 Gaming Tokens, ChainBois Has Created A System Wherein Our Gaming Token, $BATTLE, Is Deflationary.

-Every Time A Token Is Claimed In ChainBois, A Token Is Burned From The Circulating Supply Creating A Non-inflationary Web3 Gaming Token. On Top Of This, Everytime An Asset In The Game Is Purchased Using $BATTLE The Tokens Used To Purchase That Asset Are Burned. This Creats A Web3 Gaming Token That Is Deflationary And Can Not Only Sustain Value Over The Long Haul, But Will Grow In Value.

-Players Can Be Assured That They Can Financially Benefit From Playing ChainBois

-ChainBois Has Created The Next Generation Of Valuable Web3 Gaming
